

PRODUCT MANUAL

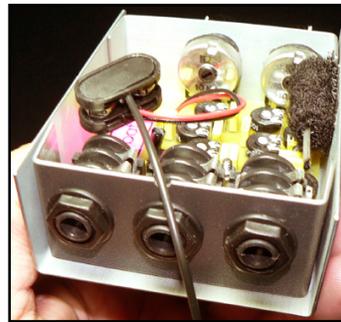

PREAMP POWER SUPPLY

This power supply fits all K&K battery powered preamps. Unlike standard, less expensive power supply adapters, this power supply is silent – it will not hum!

With this unit, you can save batteries and get better performance out of your preamp's circuit. The power supply delivers 12 volts (instead of 9 volts from a battery), which results in better headroom, more clarity, lower distortion, and lower noise.

This power supply is especially beneficial for all K&K Dual Channel Preamps (Trinity, PowerMix Pure XT, Bass Master Rockabilly, Bass Master Pro, and Dual Channel Pro Preamps) due to their relatively high power consumption.

It simply hooks up to the battery clip, instead of the battery. The thin and extra-rigid 3/32" cable exits the preamp on the in/output-jack side between lid and rear panel. The new K&K Dual Channel Preamp models even have a little notch for the cable above the center jack (see picture). We use this thin cable for the first 5 feet so that it doesn't weigh down the preamp and so that you can use it with any existing K&K preamp (even without the notch on the rear panel).

It works on 120 volt USA and 220 volt European power (with a simple travel adapter). Use the power supply whenever you do not need the freedom of movement that battery operation provides.

TECHNICAL INFORMATION

Input voltage: 100 -220 volt

Input plugtype: USA

Output voltage: 12 volt DC /100 mA

Output connector: battery clip

Dimensions: 3.3/4" L x 2 3/8" W x 1 1/4" H

Cable length: 10 feet (5 feet 1/4" plus 5 feet 3/32")

Type: Fully filtered with noise and hum free DC output
